

Innocenza Busà

**C U R R I C U L U M**

**2007**

## Curriculum Vitae

**Name:** Innocenza Busà

**Birth-place and date:** Catania, March 31<sup>th</sup> 1970

**Academic Titles:** Diploma di Maturità scientifica  
Diploma di Laurea in Fisica (Astrophysics Section)  
Dottorato di ricerca (PhD)

**Address:** Osservatorio Astrofisico - Via S. Sofia 78, 95125 Catania  
telephone: 39(0)95 7332261  
fax: 39(0)95 330592  
e-mail: ebu@oact.inaf.it

### 1 Curriculum

**1995:** I get the degree in Physics 'summa cum laude' after defending a thesis entitled "Study of the Chromospheric Activity in the Binary System HR 1099 by UV Spectroscopy";

**February 2000:** I get the PhD Diploma defending a thesis entitled "Semi-empirical NLTE models of the chromosphere of the binary system V 711 Tau".

**March 2000 - May 2001:** I work as a fellow at the Astronomical Observatory of Napoli.

**June 2001:** Post-doc Fellow at the University of Hamburg (Hamburger Sternwarte).

**Present position (Sep 2001):** Researcher at the Astrophysical Observatory of Catania Italy.

### 2 Educational Background in Astrophysics:

I attended the following Astrophysics courses at Institute of Astronomy of the University of Catania:

- 1) Astronomy
- 2) Solar Physics
- 3) Radio Astronomy
- 4) Space Physics

All courses required a final exam, which I passed with full marks.

### 3 Research fields

I have worked on the study of the 3-D structure and dynamics of magnetic signatures in the atmospheres of cool stars. I have used Doppler Imaging Technique on IUE IUESIPS and NEWSIPS high resolution spectra; the analysis implies IDL and FORTRAN software development. From these studies I have found that the controversial physical conditions that generate the broad wings of chromospheric and TR lines of many active stars, can be ascribed to localized regions rather than to the whole star (see, e.g., Busà et al. 1999).

In order to correlate stellar activity and global stellar parameters, depending on the inner structure of the stars, during my PhD studies I began to work on semi-empirical NLTE modeling of active stars. The main steps have been:

- 1) Semiempirical-models: the method and the effect of the assumptions.
- 2) ADAS (Atomic Data and Analysis Structure) to calculate the EM from the emitted flux.
- 3) Emission Measure: developing IDL-FORTRAN77 (UNIX) software to introduce the turbulent pressure in the total pressure gradient calculating.
- 4) Construction of constrained atmospheric models of active binary systems (constraints: photospheric and transition region CM-T) (UNIX-IDL).
- 5) Use of the MULTI code (Carlsson, 1986) to solve level populations of the H, Mg, C, Si, Ca, Na atomic models and comparison with observations.

In my PhD thesis I used the diagnostic power of H $\alpha$  and Mg II  $h$  resonance lines to explore the nature of the broad and narrow components detected in the chromospheric emission of the RSCVn-type binary system V 711 Tau. H $\alpha$  and Mg II lines, such as many strong spectral lines in the visible and near UV spectrum play, infact, an unique role in the study of the chromospheric structure being very efficient diagnostics of the chromospheric physical conditions in cool stars as shown by several authors. In particular I performed an extensive semi-empirical modeling of H $\alpha$  and Mg II  $h$  lines by means of NLTE radiative transfer calculations. Use is made of the transition region emission measure to constrain the upper chromosphere structure of the models.

During my PhD studies I have worked independently.

Since 1995 I have occasionally been teaching general Astronomy and general Physics to undergraduate students.

I have had also the opportunity to participate in collaborative projects inside the stellar-activity research group at the Catania's Astrophysical Observatory. I am currently involved in the "World Space Observatory" WSO/UV project.

During my fellowship at the Astronomical Observatory of Naples I have extensively worked on the study of the chromosphere-diagnostic power of infrared lines such as the triplet lines of ionized calcium, the Na I and the K I resonance

lines and on the NLTE treatment of UV line-blanketing in cool stars. This work implies the development of atomic models, modification of the NLTE radiative transfer code MULTI and the development of IDL and FORTRAN procedures.

I also have data reduction and manipulation experience in these areas:

- Reduction of CCD EFOSC spectra using MIDAS reduction facility.
- Use of the interactive data handling language IDL for data visualization, including 3D plotting and images and spectra analysis, including the IUERDAF extension for IUE data reduction. I have also developed an extensive library of my own IDL routines.

## 4 Schools and Meetings:

- JENAM 95, Joint European & National Astronomy Meetings "Progress in European Astrophysics", Catania (Italy), September 1995.
- Scuola Nazionale di Astrofisica, Acireale (CT - Italy), May 1997.
- Summer School "MHD waves and turbulence in Solar and laboratory plasmas", Königs-Wusterhausen (Berlin), September 1997.
- Summer School "Dynamical MHD Phenomena in Solar and Astrophysical Plasmas", Heraklion, Crete (Greece), July 1998.
- EUROCONFERENCE "Stellar Cluster and Associations: Convection, Rotation and Dynamos", Palermo (Italy), May 1999.
- Summer School "Radiative Transfer and Radiation Hydrodynamics", Oslo (Norway), June 1999.
- Scuola Nazionale di Tecnologie Astronomiche, Napoli (Italy), September 2000.
- IAU Symposium No. 210: "Modeling of stellar atmospheres", 17-21 June 2002, Uppsala, Sweden
- XLIX Congresso della Societa Astronomica Italiana, 2-7 May 2005, Catania, Italy
- IAU Symposium 227 "Massive Star Birth: A Crossroads of Astrophysics", May 16-20 2005, Acireale, Italy
- 10th RVS workshop - September 15-16 2005, Cambridge, UK
- XCI Congresso Nazionale Societá Italiana di Fisica, Catania, 26 Sep - 1 Oct 2005

- International Conference on “Ettore Majorana’s legacy and the physics of the XXI century, 5-6 Oct 2006, Catania, Italy Workshop
- La figura di Marcello Rodonò nella ricerca Astrofisica, 23-24 Ottobre 2006, Catania, Italy
- CATANIA WORKSHOP ON NUCLEAR AND NEUTRINO ASTRO-PHYSICS, 16-17 Febbraio 2007, Catania, Italy
- 51 Congresso Nazionale Societá Astronomica Italiana, 17-20 Apr 2007, Firenze, Italy Workshop ”Acquisizione ed elaborazione di immagini scientifiche in IDL ed ENVI”, 9 May 2007, Catania
