Preface

Ontology is a cross-disciplinary field concerning the study of concepts and theories that support the building of shared conceptualizations of specific domains. The study of ontologies has been assisting in the problem solution in as diverse areas as Computer Science, Information Science, Philosophy, Artificial Intelligence, Linguistic, Knowledge Management. Particularly, it is being largely used for information capturing and organization in many areas of Science and Industry and applications. The Seminar on Ontology Research in Brazil, ONTOBRAS, foresees an opportunity and scientific environment in which researchers and practitioners from Information Sciences and Computer Science can discuss the theories, methodologies, languages, tools and experiences related to ontologies development and application.

The tenth edition of ONTOBRAS, hosted in Brasilia, Brazil, was organized by the Catholic University of Brasilia (UCB), National University of Brasilia (UNB) and Federal University of Rio Grande do Sul (UFRGS). We would like to deeply thanks the sponsors of this year edition of ONTOBRAS, namely, The International Association for Ontology and its Applications (IAOA), the CAPES Foundation, from the Brazilian Federal Government, and the Foundation of Research Support of Distrito Federal of Brazil (FAPDF).

Researchers and practitioners were invited to submit theoretical, technical and practical research contributions that directly or indirectly address [ontology theory \[s1\]](#) and application issues. The call for papers was open for two categories of submissions: papers describing original work with clearly demonstrated results to be presented in ONTOBRAS main track, and reports of ongoing thesis and dissertation to be presented in the Workshop of Thesis and Dissertations on Ontology. We had received 27 paper submissions for the ONTOBRAS and 8 reports for the WTDO. The program committee composed by 22 researchers from Brazil and Europe and 6 sub-reviewers had chosen the best 8 papers for half-hour oral presentation and another 8 articles for poster presentation. In the WTDO track, 7 papers were selected to be presented in a special session with participation of 8 examiners from Brazilian PhD programs.

The content in this volume is thus constituted by 16 papers and 7 thesis and dissertation reports. They provide meaningful insights to start additional research in ontology theory and applications. We thank the authors for their submissions and the program committee for their hard work. We are also grateful for the academic Julia Eidelwein for the organization of this volume.
