

# Proceedings of the 14th Asia-Pacific Workshop on Mixed and Augmented Reality (APMAR2022)

December 2022

## Preface <sup>1</sup>

In the last decades, mixed and augmented Reality (MR/AR) have evolved and grown from being experimental / research technologies to now have serious impact and practical applications in the industry and society worldwide.

Asia-Pacific Workshop on Mixed and Augmented Reality (APMAR) is the successor to the Korea-Japan Workshop on Mixed Reality (KJMR) which originally started back in 2008, expanded in 2016 to promote mixed reality research and collaborations in the Asian/Oceanic region.

This year, we have 31 submissions including “Regular Papers” and publication-less presentations (“Pitch Your Work”). Through the peer-review by program committee of this workshop, 13 papers were accepted for this volume, 9 as full papers and 4 as short papers.

We would like to thank the authors for submitting their papers and all the reviewers for providing their expertise and suggesting constructive advice to improve the quality of published papers. We also would like to thank the organisers of the ICAT-EGVE 2022 for their all support.

Organizing Committee

## Organizing Committee

- General Chairs
  - Itaru Kitahara, University of Tsukuba
  - Liwei Chan, National Yang Ming Chiao Tung University
- Program Chairs
  - Hideaki Uchiyama, Nara Institute of Science and Technology
  - Hsin-Ruey (Ray) Tsai, National Chengchi University
