K-Space PhD Jamboree Workshop 2008

The following proceedings contain the research papers from the 2nd K-Space PhD Jamboree workshop held on 25th July 2008 at ParisTech, Paris. The Jamboree was organized by and for PhD students participating in the EU IST project K-Space, a Network of Excellence dealing with semantic inference for semi-automatic annotation and retrieval of multimedia content (http://www.k-space.eu), with the goal of identifying potential cooperation across research fields. Following the model of the first K-space Jamboree, held on 14th September 2007 at Technische Universität Berlin, we created a one day workshop containing two poster sessions and a hacking session, where the students presented their works and discussed about their research.

We would like to thank all the people who contributed their papers to these proceedings and ensured that this Jamboree was a very successful event. Also, thanks to Dr. Paul Buitelaar from DFKI, Germany for the key note talk.

Francesca De Simone (EPFL, Switzerland)
