June 2024

# Survey data made easy

Mission

Master trends, brands, and markets. With Consumer Insights you get access to all results of our exclusive surveys on brands and audiences. We provide you with the customer insights you need to make the right data-driven decisions for your business.

## **Understand your target groups and have a global overview**

Tap into markets, track brands, and compare global and regional trends of consumer behavior. Focus on the people that matter most to you, and gain industry-specific insights on the world's most important markets. Make the right decisions and tell convincing stories based on tailored data. Understand, explore, compare, track, focus, decide, and act.

## **We give you the data and the tools to do all this and more**

The Statista Consumer Insights capture attitudes, consumer behavior, and media usage of consumers worldwide, covering both the online and offline world. Up-to-date, representative, comprehensive, detailed, and inclusive.

# Statista Consumer Insights stand for transparent quality from questionnaire to results

# Our surveys at a glance: Global survey, Brand KPIs and in-depth surveys

Idea and contents: surveys (1/2)

## **Global Survey: Comparable data from more than 55 countries**

Compare regional and global trends in worldwide consumer behavior. Select from more than 55 countries in the Global survey, each with up to 60,000 respondents per year, and find your (future) customers.

## **Brand KPIs: Benchmark mark your brand against the best and the rest**

In the Brand KPI survey you will find the most important KPIs for brands in Brazil, Germany, India, Mexico, the U.S., and the UK. It's the perfect tool for brand strategists, product managers, media planners and anyone who works with brands. We cover a range of topics from AI tools to frozen pizza to movie franchises.

## **In-depth surveys**

In addition to the Global survey and Brand KPIs, access more than 25 exclusive, in-depth surveys on the most relevant industries and topics. With the Consumer Insights surveys, you gain industry-specific insights into the world's most relevant markets.

# Do you want the big picture or is the devil in the detail for you? Well, you can have both at the same time

Idea and contents: surveys (2/2)

 <p><b>Rethinking Value</b></p> <p>Discover how the cost-of-living crisis is reshaping online behaviors in the "Rethinking Value" study by We Are Social and Statista Q. Delving into the changing relationships between influencers, brands, and consumers, the survey uncovers the growing appeal of budget-friendly, reliable content on social media. Be part of the conversation that's shifting from luxury to affordability.</p>	 <p><b>Pets</b></p> <p>Results of our exclusive survey on all topics concerning pets. This study provides insights into the attitudes, purchase behavior and popular brands of pet owners. This consumer survey focuses on nutrition, health, and all the latest trends about animal companions.</p>	 <p><b>Christmas and Holiday Season</b></p> <p>This survey gives insight into the Christmas and Holiday Season. It covers habits, traditions and behaviors during the holidays season and explores gift shopping, dining, and activities during the holidays. Additional topics include Black Friday, New Year's Eve, Thanksgiving (U.S. only), Day of the Dead (MEX only), and Carnival in Brazil. The study provides also insightful attitudes about the ongoing economic and political situation.</p>	 <p><b>Gaming &amp; eSports</b></p> <p>Who plays what, why and on which devices? Where can you get in touch with gamers? How big is eSports? Discover what drives video gamers in countries worldwide with our major study on gaming, hardware and peripherals, eSports and gaming furniture.</p>	 <p><b>Alcoholic Drinks</b></p> <p>This exclusive survey provides insights into consumers' drinking behavior. Dive in and find out what consumers around the world think about beer, wine, and spirits. Discover information about purchase criteria, and the most popular brands for beer, cider, sparkling wine, and spirits.</p>	 <p><b>Finance &amp; Assets</b></p> <p>This survey offers exciting insights into the saving and investing habits of consumers. Find out how much consumers are saving each month, where they get their information, and whom they consult for advice.</p>	 <p><b>Rethinking Value</b></p> <p>Survey among travelers on attitudes, preferences, and behavior with regard to travel. From travel planning and booking to the journey and the vacation itself: destinations, tourist offers, booking portals, flights, cruises, travel insurances and more.</p>
 <p><b>Digital Advertising</b></p> <p>This exclusive survey provides insights into consumer behavior and preferences with regard to digital advertising. Topics include internet and social media usage, content and product discovery, advertising acceptance, personalization and tracking on different channels, paid content and subscriptions, and more.</p>	 <p><b>Beauty &amp; Cosmetics</b></p> <p>This study sheds light on the beauty market from the perspective of female consumers. It shows attitudes, spending, product preferences and brand loyalty in the areas of decorative cosmetics and facial care. It also includes insights into beauty and self-care routines, beauty tech and natural cosmetics.</p>	 <p><b>Food &amp; Nutrition</b></p> <p>This study provides you with everything you need to know about nutrition and grocery shopping, including cooking, eating habits, prepared foods, organic foods, and snacks. Also, we put a special focus on plant-based alternatives to dairy and meat, as well as grocery and meal deliveries.</p>	 <p><b>Hot Drinks</b></p> <p>This survey probably answers everything you could possibly ask about the consumption of hot beverages such as coffee, tea, and cocoa. Get detailed information on consumption habits, favorite brands, and attitudes towards the topic.</p>	 <p><b>Toys &amp; Games</b></p> <p>This survey provides you a deep dive into the world of toys and games. Discover the true drivers behind toy purchases, find out about the relevance of different toy categories such as card and board games or electronic toys and games, and read about the role of age appropriateness and toy purchase situations in general.</p>	 <p><b>E-commerce</b></p> <p>Statista's exclusive e-commerce survey offers detailed insights into consumer shopping behavior online. This study examines the online customer journey, consumer attitudes and the online stores consumers use. Consumers were also given the chance to rate the top e-commerce brands by key characteristics, satisfaction, and NPS, to give a detailed overview of the current online landscape, while also providing the opportunity for benchmarking against these established brands in each country.</p>	 <p><b>Luxury &amp; Counterfeiting</b></p> <p>The survey offers exciting insights into the world of luxury buyers. The contents include luxury products and premium brands in the fields of fashion, accessories, watches, cosmetics and jewelry, as well as attitudes towards luxury and a spotlight on the topic of product and brand counterfeiting.</p>
 <p><b>Luxury Shopping</b></p> <p>The luxury shopping study offers exciting insights into the world of luxury customers, such as consumer attitudes and behavior towards premium and luxury products. Discover detailed opinions on luxury goods such as watches, jewelry, cosmetics, fashion, and accessories. Furthermore, understand brand awareness and purchases across 6 different markets, worldwide.</p>	 <p><b>Purchase Channels</b></p> <p>The results of Statista's consumer survey focusing on the purchase channels of consumers. This study provides exclusive insight into the shopping behavior across 18 different industries. Find detailed information about the preferred shopping channels, expenditures, and attitudes regarding shopping.</p>	 <p><b>OTC &amp; Pharmaceuticals</b></p> <p>This survey provides insight into health-related topics, such as eHealth, medical cannabis and CBD, and mental health. It lets you compare pre- and post-pandemic data from 2019 and 2021. Explore the purchasing and usage habits of OTC products for colds, skin disorders, pain, sleep disorders and digestive problems. In addition, the study gives valuable consumer insights on health trends and more than 100 healthcare brands.</p>	 <p><b>Sustainable Consumption</b></p> <p>This study provides insights into attitudes, consumer behavior and brand perception with regard to sustainability in the categories of food &amp; beverages, fashion and beauty &amp; personal care. It addresses sustainable eCommerce as well as drivers and barriers of sustainable consumption. Additionally, it sheds light on behavioral changes due to the influence of the COVID-19 pandemic.</p>	 <p><b>Cybersecurity &amp; Cloud</b></p> <p>Results from Statista's exclusive survey on attitudes, behaviors and brands in the sphere of cybersecurity. Topics: Perception of risks, experience with hacking and identity theft, awareness of brands for protection software, and much more.</p>	 <p><b>European Football Benchmark</b></p> <p>A close-up of clubs, sponsors and fans in 2021. The Statista European Football Benchmark lets you compare fan opinions on the 5 big European leagues and other trending topics. This survey contains exclusive insights from each league's domestic fans as well as fans in the U.S. and China.</p>	

## In-depth surveys

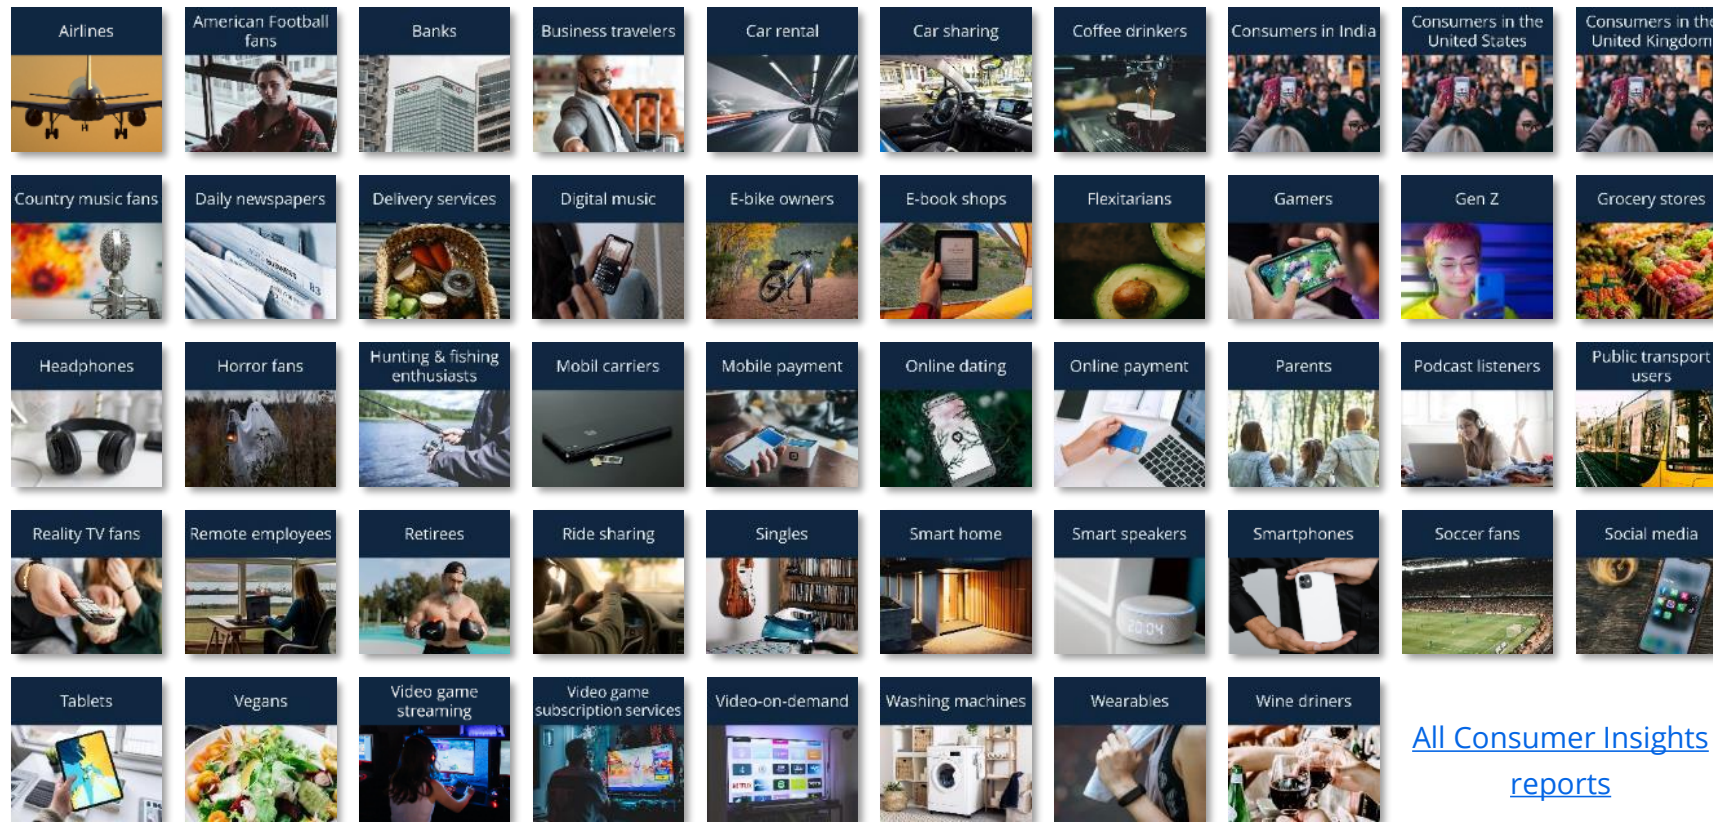

In addition to the Global survey, we regularly conduct trend surveys in the world's most relevant markets. Coffee, e-commerce, Christmas, sports, digital advertising, pharma, beauty, football<sup>(1)</sup>, luxury, sustainability, food, pets, digital lifestyles, finance, motorbikes, toys, travel, tech giants - okay okay, you heard us, we'll stop listing already.

Our Consumer Insights surveys give you in-depth insights into trending, specialized or just generally exciting topics. These surveys usually get an update every 2 years, and more are being added all the time.

[All Consumer Insights surveys](#)

# Case study for target group analyses: Consumer Insights reports on brands, target audiences, and countries

Idea and contents: reports

A good example of the possibilities of [target group analyses](#) and an invitation to storytelling are our Consumer Insights reports. Based on survey data on more than 20,000 brands and target audiences worldwide, they bring Consumer Insights to life.

Find out which brand resonates best with which target group, where you can best promote your products, and which preferences determine consumers' decisions around the globe.

Our reports are updated up to four times a year. Don't you think so? Just click on your favorite topic on the left.

[All Consumer Insights reports](#)

# The research design: Representative online surveys in national languages

Idea and contents: research design

## Type of survey

- Online survey
- Interview length up to max. 20 minutes
- Global survey: Split questionnaire design

## Population and sampling

For the vast majority of our surveys, the samples represent the population of internet users aged 18 to 64. Our in-depth surveys sometimes have different base populations (e.g. pet owners or internet users aged 16 to 64). We use quota samples with quotas on gender, age and region<sup>(1)</sup>.

## Sample sizes (target numbers)

- Countries with brands in the Global survey:  
12,000+ respondents / update<sup>2</sup>
- Countries without brands in the Global survey:  
2,000+ respondents / update
- Brand KPI survey and in-depth surveys:  
1,000+ respondents per category

## Languages

- Survey in the respective national language(s)
- English available as alternative in each case

## Survey periods

- Global survey: All year [rolling wave system](#)
- All other surveys: Details on the survey periods can be found in the [Consumer Insights tool](#) under "Show survey details".

## Updates

- Countries with brands get four updates per year
- For countries without brands, we aim for one update per year

8 | Notes: (1) Quota on region for countries and regions for which regional quota information is available to our panel providers.  
(2) Switzerland as an exception gets 6,000+ respondents per update

# Our Global survey is a truly global survey

Idea and contents: countries and regions

In the Consumer Insights Global survey, you will find survey results from more than 55 countries and regions. Compare regional and global trends in worldwide consumer behavior.

To give you maximum depth of analysis, we also survey brand usage in more than 20 countries and regions across 50 industries from the online and offline world.

Countries with brands receive four updates per year, while for countries without brands we aim for at least one update per year.

## Countries with brands

-  Australia
-  Austria
-  Brazil
-  Canada
-  China (Mainland)
-  Finland
-  France
-  Germany
-  India
-  Italy
-  Japan
-  Mexico

-  Philippines
-  Portugal
-  Romania
-  Russia
-  Saudi Arabia
-  Serbia
-  Singapore
-  Taiwan
-  Thailand
-  Turkey
-  United Arab Emirates
-  Vietnam

# Brands make markets

Idea and contents: brands

Brands are at the heart of consumer behavior worldwide. That's why the Consumer Insights include usage data from more than 20,000 brands for over 20 countries and regions around the globe.

## **Brand research for our Consumer Insights is collected regionally**

In order to provide you with the best possible, most exciting and most complete brand experience, we do not conduct the brand research for the Consumer Insights surveys entirely ourselves. Of course, we know the global megabrands and have detailed market expertise at Statista. But for the depth and sharpness with which we map local brand landscapes in the Consumer Insights, we need local knowledge. That's why we employ local experts for each country and region in which we survey brand usage, who help us to accurately capture the brand landscape of their region.

The next time you conduct a brand analysis with the Statista Consumer Insights, you know: behind it are locals, Statista's market experts, years of market research experience and intensive feedback. Our brand research is local, global and up-to-date.

Here's the full [Consumer Insights brand list](#).

# We give you deep insights, with raw data

From data to insights: raw data

We are particularly proud of our quality controls and our data cleaning. So proud, in fact, that we let you look really deep into the data: Upon request, we also provide interested parties with the raw data from our surveys, the datasets that form the backbone of the Statista Consumer Insights.

All raw respondent-level data sets are 1:1 as we use them in the Consumer Insights. Analyses of this data provide exactly the same results as the Consumer Insights tool, but with greater depth and even more possibilities.

While the Consumer Insights tool already enables individual analyses, the raw data opens the doors to a whole range of sophisticated statistical procedures. If keywords like data fusion, target group segmentations and causal analytical models give you goosebumps, [get in touch with us](#).

## CHAPTER 02

# Method and data quality

What do online research and farming have in common? Meticulous fieldwork ensures an A-grade product. We guarantee the quality of our Consumer Insights surveys' results through professional online panel service providers, a split questionnaire design, quota sampling, rolling waves, inclusivity, smart quality assurance, and transparent data cleaning.

- Representativeness
- Panel partners
- Quotas
- Inclusivity
- Rolling waves
- Sample sizes and error margins
- Split design
- Data fusion
- Quality assurance

# Are the results of the Consumer Insights surveys representative?

Method and data quality: representativeness

Of course, you are not only interested in what the respondents answered in our survey, but also in whether these results can be generalized. That's the question of [representativeness](#): Are the results a reflection of the world out there?

This is exactly the claim we have for our Consumer Insights surveys, and it starts with the wording of the [questionnaire](#). Our questions strive for simple but precise language and are designed to allow respondents to answer objectively. Our [split design](#) also ensures refreshingly short survey durations, so respondents don't get tired.

The second element of a generalizable survey is a sample that is similar to the selected [population](#). In the case of our surveys, this is internet users (online survey!) between the ages of 18 and 64 in each country. To ensure that the composition of our sample meets this criterion, we set [quotas](#) for age, gender, and region<sup>(1)</sup>. Established panel service providers put us in touch with respondents.

And in parallel to all this, we conduct ongoing meticulous [quality assurance](#) before, during and after the surveys.

# We use online panels to successfully conduct our online surveys

Method and data quality: panel partners

Every year, we ask more than 400,000 consumers worldwide to complete the questionnaire of our Global survey, so that we can offer you regular updates with the highest possible number of respondents. In order to do this successfully, we commission panel service providers. Our panel service providers meet the established quality assurance requirements and ethical market research principles according to standards such as [ESOMAR](#), [MRS](#), [ARE](#), [MRIA](#), [AMA](#) and [ISO 20252](#).

## **What do panel service providers do?**

Panel service providers enable us market researchers to have a predefined number of people complete online surveys. We can specify selection criteria for these people, such as "52 percent female, 48 percent male". More on this in the [section on our quotas](#). In addition, panel service providers offer a variety of services and tools that make it easier for us to conduct the surveys and perform quality checks at every step.

## **Where do the panelists come from?**

Panel service providers recruit their panelists online, through channels such as sponsored posts, advertising, or partnerships with websites. Panelists provide the panel service provider with basic personal information such as age, gender, income, marital status and more. Panelists then receive invitations to participate in matching surveys via mail or app. Once they have completed a survey, they receive a small compensation for their participation.

# Representation matters, that's why we set quotas on respondents by age and gender

Method and data quality: quotas

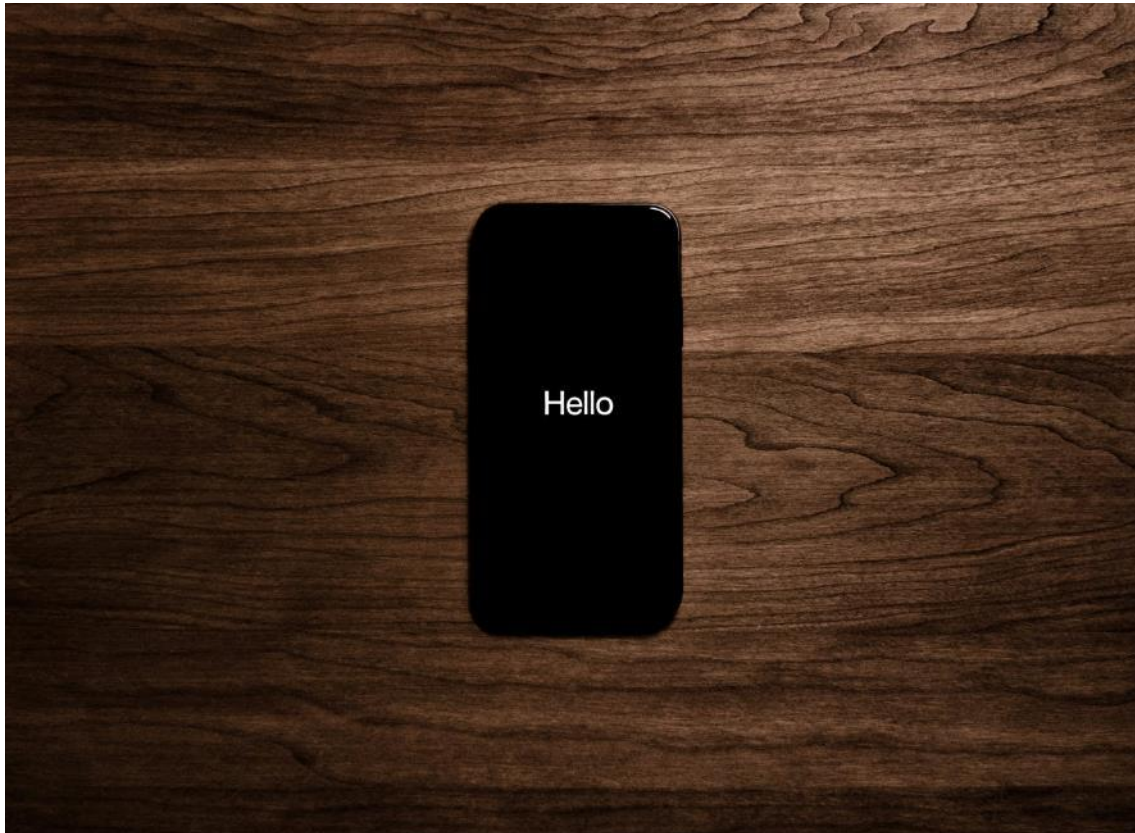

To guarantee that the results of the Consumer Insights surveys are representative of the online population (18 to 64 years) of a country or region, we apply quotas on age, gender and - where possible - region when selecting respondents. The quotas are based on the official census of the respective country as well as on the respective share of internet users. Our experienced quota experts combine the best available sources, such as [Eurostat](#), [World Bank](#), or the [International Telecommunication Union \(ITU\)](#), to precisely determine the share of internet users.

To maximize the quality of our data for you, our quotas are additionally "interlocked". This means, we take into account that the distributions of age, gender, and internet usage in the individual countries and regions are not independent of each other and quote these characteristics in dependence on each other.

In line with the underlying sources, our quotas are updated annually.

# Conviction is just one of many good reasons for inclusion

Method and data quality: inclusivity (1/2)

Behind the Statista Consumer Insights is a multicultural team with diverse beliefs and orientations. In order to be on the pulse of consumers worldwide, to represent global and regional markets, and out of conviction, the Consumer Insights must be as inclusive as possible.

## **Always in local language**

In order to enable as many consumers as possible to participate in the survey, the questionnaire for each country is available in the respective main languages as well as in English. We conduct our surveys [in a total of 39 languages](#). You receive accurate market analyses because all market participants are potential participants in our surveys.

## **Optimized for mobile**

We are talking about an online survey and the vast majority of internet users are mobile. To do justice to this, our surveys are optimized for mobile devices: wherever possible, no [matrix/rating questions](#) and no more than 15 possible answers to a question. This way, our results are not random, but accurate.

# Markets as they are: dynamic and colorful

Method and data quality: inclusivity (2/2)

## **LGBTQ+**

In addition to the binary gender question, where it is legal and unproblematic for the respondents, we collect self-identification with the LGBTQ+ community, gender identity (female, male, trans female, trans male, genderqueer / genderfluid, non-binary) and sexual orientation (heterosexual, homosexual, bisexual, pansexual, asexual, queer). The world is colorful, people are colorful, markets are colorful, and consumption is colorful too.

## **Migration und ethnicity**

People not only move markets, but also move themselves. Migration is a global normality and in order for you to be able to accurately analyze the markets you are interested in, we collect the migration background and the country of birth of respondents in the Global survey, as well as their [ethnicity](#), according to the standards of the respective official census.

# Surf Consumer Insights with the most up to date consumer data

Method and data quality: rolling waves

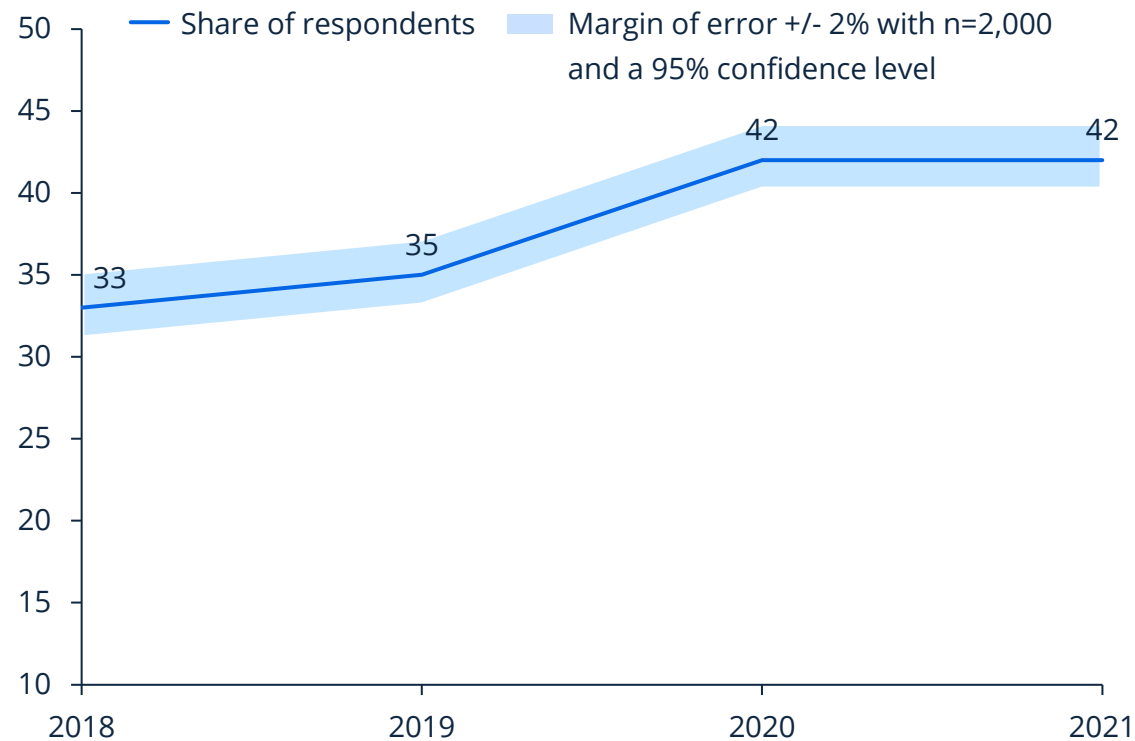

For our more than 20 [countries with brands](#) we use a survey system with rolling waves: Each update contains the interviews of the four most recent survey waves or, in other words, the interviews of the last 12 months. This ensures trend stability in your analyses and a higher number of interviews per update, allowing you to adequately evaluate smaller target groups, brands and markets.

We ensure that no respondent can participate in the survey twice within a 12-month period. Thus, there are never two interviews of the same person in one update / data set.

# Sample up - yes, size matters

Method and data quality: sample sizes and error margins

## "I try to eat less meat", Germany, in %

Some countries and regions covered by our Global survey have up to 60,000 respondents per year, but some surveys have only 1,000. Is that enough interviews for the results to be representative? In fact, the sheer size of the [sample](#) has nothing to do with the [representativeness](#) or generalizability of the results. What is important is that the sample is as accurate a reflection as possible of the general [population](#).

The sample size, on the other hand, determines how much the measured value - e.g. "42% of respondents try to eat less meat" - differs from the real value in the world out there. Here, the larger, the more accurate. The possible inaccuracy is typically referred to as the [margin of error](#)<sup>(1)</sup> and can be calculated.

Let's stick with the 60,000 respondents per year. This gives a margin of error of less than half a percent. In some surveys, the number of respondents is only 1,000; here, the margin of error is plus or minus 3%. In terms of accuracy, therefore, size does matter; larger is generally more accurate. For practical analyses, however, sample sizes of 1,000 and above are usually sufficiently accurate<sup>(2)</sup>.

# How long can you answer questions without getting tired?

Method and data quality: split design

All respondents	Demographics, media usage, and general consumer behavior	
Split 1	Finance & insurance	Health
Split 2	E-Commerce & retail	Food & nutrition
Split 3	Housing & household equipment	Internet & devices
Split 4	Travel	Mobility
Split 5	Media & digital media	
Split 6	Services & e-services	Marketing & social media

## Questionnaire splits

The [questionnaire of the Global survey](#) is divided into topic groups. Up to two of these topic groups form a questionnaire split. Each respondent initially answers the same questions on demographics, media usage, and general consumer behavior. Additionally, each respondent answers one split.

Why do we split the questionnaire? It's all about data quality: splits avoid respondent fatigue. Answering our questionnaires should take no longer than 15, maximum 20 minutes. This ensures that all questions are answered with the same attention. Only in this way do all answers to all questions have the same validity. If a respondent answered all questions from all splits, large parts of the results would be qualitatively questionable, which is why we don't make any compromises here.

## Do splits affect possible cross-tabulation?

Generally, questions can only be cross-tabulated within the same split. We are working hard on a feature that is designed to solve this problem. Stay tuned for [data fusion in 2024!](#) The even better news is: You can cross-tab questions from demographics, media usage, and general consumer behavior with all splits. Same goes for [target group analyses](#).

# Coming in 2024: Our data fusion guarantees the greatest possible research freedom while ensuring the best possible data quality

Method and data quality: data fusion

## A doppelgänger for every respondent

In our Global survey, we rely on a [split design](#). This means that all participants answer questions about their demographics and media usage but receive only a limited selection of other topics in the Global survey.

This approach shortens the survey duration and ensures that you get data of the highest quality. But what happens if you want to combine topics from different questionnaire parts?

This is where our innovative concept comes into play: For each respondent, we create an 'artificial twin' in every other part of the questionnaire. This doppelgänger matches the original in terms of age and gender and shows a high degree of similarity with regard to another 45 criteria.

When you conduct an analysis or define a target group that combines information from different parts of the questionnaire, we'll automatically use these digital doppelgängers to provide you with precise and meaningful results<sup>1</sup>.

# The Consumer Insights offer a lot of everything, but most of all **quality**

Method and data quality: quality assurance (1/3)

A complex data project like the Consumer Insights requires smart, effective quality assurance measures. And in our case, these take effect during the selection of respondents, during fieldwork, and then once again during data cleaning.

## **Quality assurance during the selection of respondents**

It goes without saying that our panel service providers comply with common quality norms and standards such as [ESOMAR](#), [MRS](#), [ARF](#), [MRIA](#), [AMA](#) and [ISO 20252](#). In addition, our service providers employ a range of technical measures to effectively detect and prevent fraudulent behavior - such as the use of the notorious bots. This includes digital "fingerprinting" just as much as IP address checking. In addition, a number of proprietary security solutions are employed, including [RelevantID®](#), [MaxMind](#), [Firehol](#), [reCAPTCHA](#) and [SmartyStreets](#). This is how we make sure that behind every interview in our surveys there is a real consumer. Too bad, bots!

# Slow and steady wins the race

Method and data quality: quality assurance (2/3)

## Quality controls during the survey

Bots can be cute, but we really don't want them in our survey. For a second bot check during the survey, for example, we use "input questions" and check the answers for bot-typical patterns.

But we also check that our human participants fill out the survey truthfully and attentively. First, we screen out all participants who finish answering the questionnaire too quickly, the so-called "speeders". The lower limit is 40% of the median interview length of all respondents in the previous waves.

During the questionnaire, we then check respondents' attention using test questions. Also, we build in consistency checks: We ask certain questions a second time at a different point in the questionnaire and then expect the same answer twice.

Within the responses, we also check for clustered occurrences of traits that tend to be rare in the population and sort out respondents with conspicuous response behavior.

# Everyone loves the crime scene cleaner

Method and data quality: quality assurance (3/3)

## Quality assurance during data cleaning

Some people are only too happy to let the cleaning of the collected [data](#) go by the wayside. But not us. Here you can find out what criteria we apply to clean the Consumer Insights data.

Our main criterion is the consistency of your evaluations: Your cross-tabulations and target group analyses should be free of contradictions. In complex studies, it can happen that participants contradict themselves. For example, when asked about the mobility services they use, they state that they use car sharing. A little later, they are asked which car sharing brands they use, and answer "I don't use car sharing".

We then correct the first answer to match the second, because the respondent also corrected themselves – perhaps they confused car sharing with ride sharing and only realized this from the list of brands.

If respondents contradict themselves too often, we remove their answers from the data set. This rarely happens, and that in turn speaks for the quality of respondents and our questionnaires.

## CHAPTER 03

# Solutions

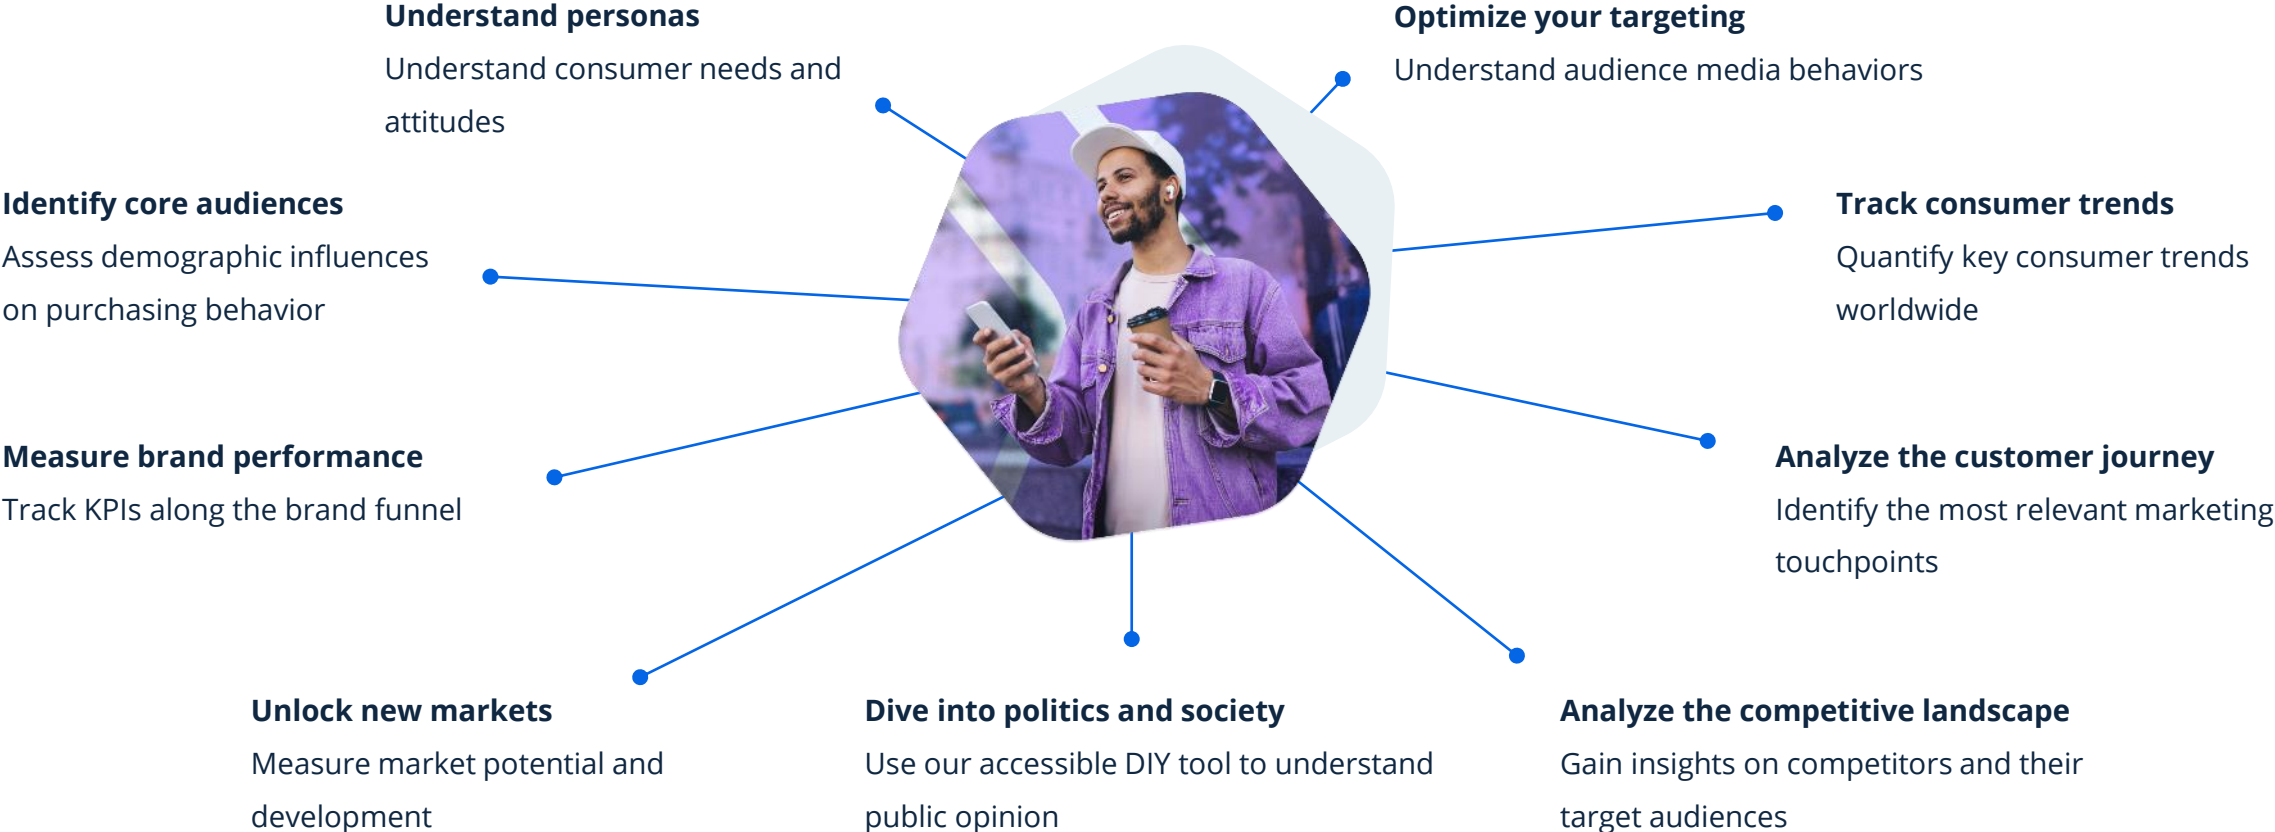

Understand your audience to master trends, brands, and markets. Not yet sure how exactly? Relax, in this chapter you will find customized solutions, and none of them require more than just three steps in our Consumer Insights tool.

- Overview
- Audiences
- Personas
- Brands
- Markets
- Trends
- Communication planning
- Politics and society

# Our Consumer Insights offer valuable insights into consumer behavior, preferences, and trends

Solutions: overview

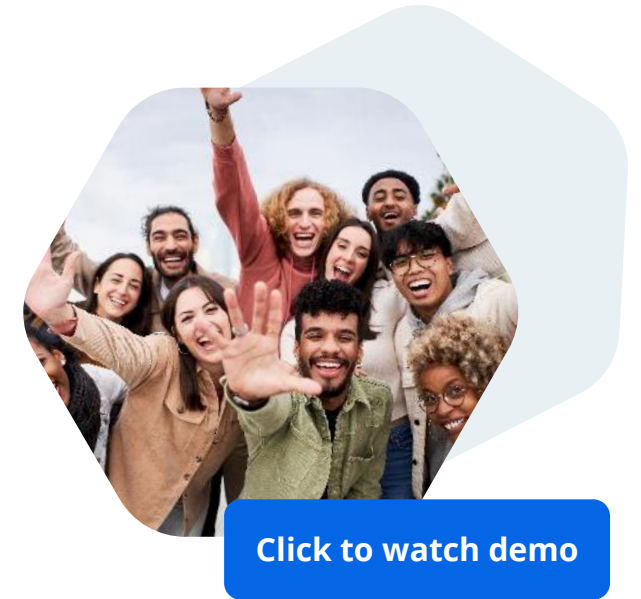

# Read the room to perform well

Solutions: audiences – identify and understand your audience

## Get to know the key characteristics that define your target audience

Use Statista Consumer Insights to identify the segments most interested in your product or service and create vivid portraits of your core target audience. This will allow you get an intuitive understanding of them, create products and services specifically made for them, and tailor messages that speak their language.

### Build cross tables

Cross table customers of your product or service with countless variables of interest.

### Identify your target audience

Use our index-function to spot demographics, psychographics, and behaviors that stand out.

### Create a vivid portrait

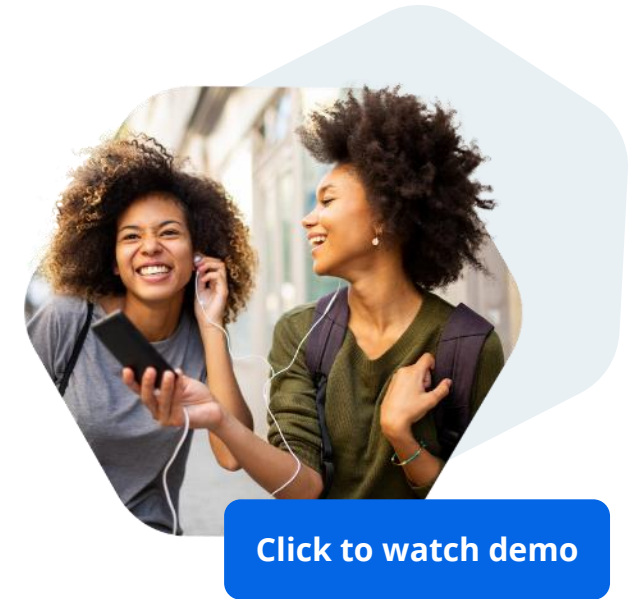

Download the data and build a vivid portrait of your core audience.

# Bait the hook to suit the fish and not the fisherman

Solutions: personas – create and understand your personas of interest

## Custom build your own personas and learn about them

Use Statista Consumer Insights to build your own multi-dimensional personas based on thousands of demographics, psychographics, lifestyles, and behaviors to choose from. This will allow you to benchmark your personas against other segments, see over 500 industries and topics through their eyes, and learn about their preferences and pain points.

### Create a persona

Use our target group editor tool to custom build multi-dimensional personas.

### Select a market

Choose among 56 countries and their regions as well as over 500 industries and topics.

### Understand a persona

Apply your personas and learn about their lifestyle, preferences, and behaviors.

# Your brand is the real MVP

Solutions: brands – measure brand characteristics and performance

## Benchmark the value of your brand and understand purchase drivers and user characteristics

Use Statista Consumer Insights to conduct your own analyses on over 15.000 brands. Understand the characteristics that define them and identify the key demographics and psychographics of their users. Use our exclusive Brand KPI survey to deep dive KPIs along the brand funnel (awareness, popularity, usage, loyalty, and media buzz) of over 5.000 brands and benchmark them against their competition.

### Explore brand characteristics

Cross table brands with purchase criteria, perceived strengths, and other variables of interest.

### Identify user demographics

Make use of heatmaps to spot demographics that stand out among brand users.

### Measure brand KPIs

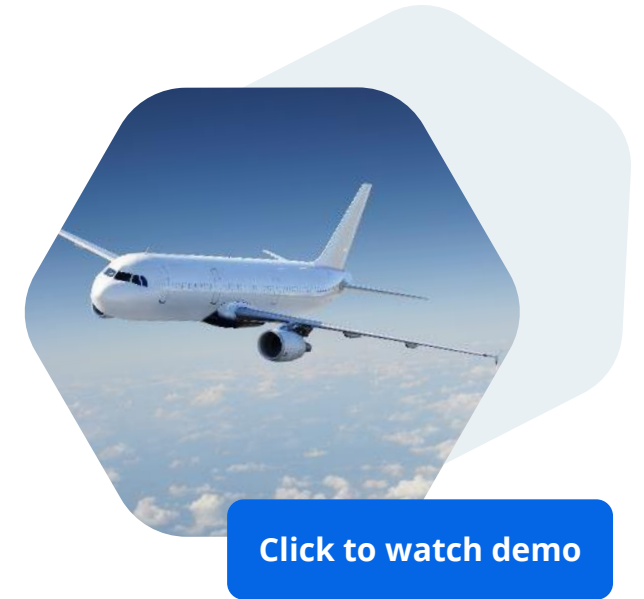

Use our Brand KPI survey to build a brand funnel and benchmark your brand against competitors.

# Understand foreign markets for borderless growth

Solutions: markets – unlock new markets

## Understand the landscape, culture, and dynamics of foreign markets

Use Statista Consumer Insights to examine and compare consumer behavior in 56 countries as well as their regions to identify unique market characteristics and dynamics. This will allow you to understand cultural and social nuances in new markets, adapt your offering to local cultures, and minimize your risk when entering new markets by making informed decisions.

### Compare countries and regions

Explore national or regional differences in consumer behavior with our country comparison tool.

### Analyze the landscape

Explore which brands are dominating a market and find out what their strengths are.

### Measure market size

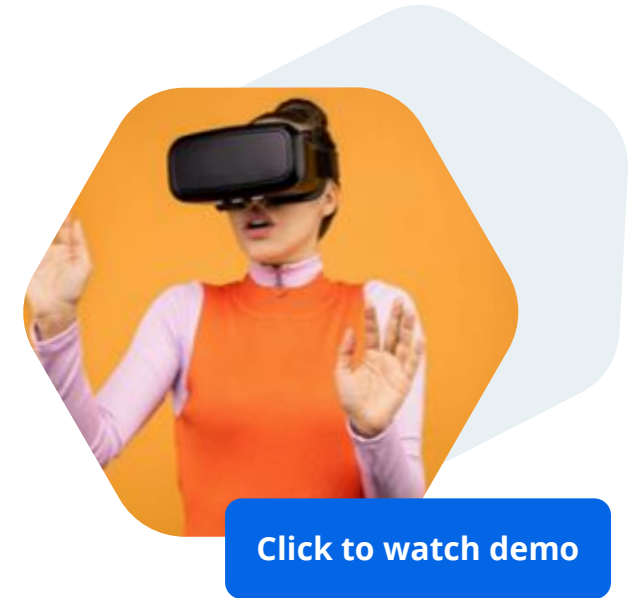

Make use of our population and segment estimates to quantify your potential in new markets.

# Find out where the wind of opportunity is blowing

Solutions: trends – track and measure consumer trends

## Align your strategy with the evolving needs of consumers

Use Statista Consumer Insights to observe the changing preferences, behaviors, and attitudes of consumers for over 500 topics and industries from 2018 through the pandemic to today. This will allow you to identify gaps in a market, be innovative by meeting new demands, and gain a competitive advantage by staying ahead of trends.

### Create timelines

Observe changes in consumer attitudes and behavior over time with our time comparison tool.

### Identify who is driving a trend

Cross table consumer trends with regions, demographics, and psychographics.

### Measure market size

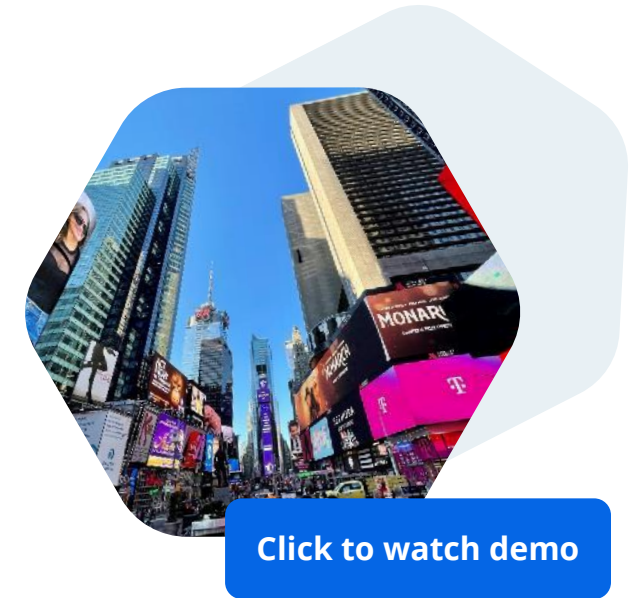

Use our population and segment estimates to quantify the potential of key consumer trends.

# Make sure your message lands with impact

Solutions: communication planning – optimize your targeting

## Identify optimal advertising channels and develop content strategies

Use Statista Consumer Insights to find the digital and non-digital advertising touchpoints of the people you want to reach with your advertising and learn about the topics, genres, and formats that engage them. This will allow you to evaluate advertising channels based on their suitability for your target audience, align your content with their identity and values, and tailor messages that speak their language.

### Apply your target audience(s)

Use our target group editor tool to custom build your target audience(s).

### Evaluate advertising channels

Use our index-function to find the most effective channels for your target audience(s).

### Identify relevant content

Cross table your target audience(s) with values, topics of interests, genres, and formats.

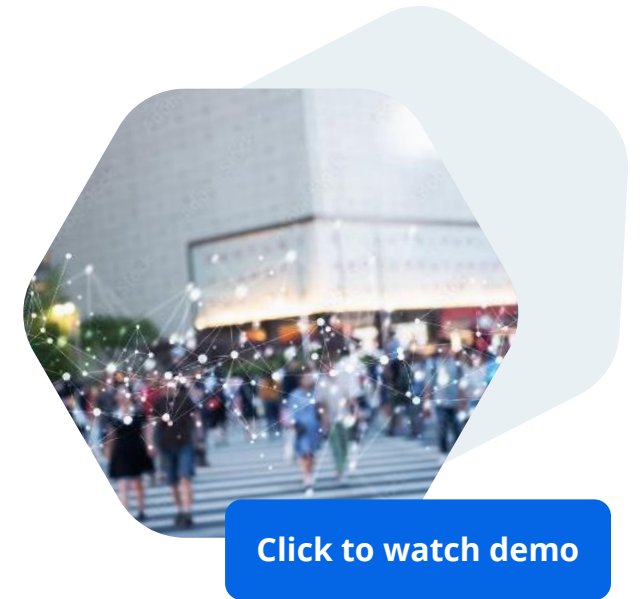

# Put your finger on the pulse of society

Solutions: politics and society – understand public opinion

## Track public sentiment, the mood of society, and cultural shifts

Use Statista Consumer Insights to gage the current economic mood, cultural characteristics, and opinions on politics and policies of consumers in 56 countries. This will allow you to comprehend the cultures that shape consumer behavior, assess public opinion and political dynamics to avoid controversies, and understand the issues, challenges, and mood of specific segments of the population.

### Select a country or region

Examine the cultures, political landscapes, and public opinions in 56 countries and their regions.

### Understand segments

Learn about the issues, mood, political opinions, and outlooks of specific segments.

### Compare countries and time

Use our comparison tool to compare challenges of countries and identify societal trends.

## CHAPTER 04

# Consumer Insights tool

Every professional task requires effective tools to get the job done. With the Consumer Insights tool, you get a well-designed toolbox enabling you to use our survey data for your solutions. This chapter introduces a set of advanced features of our tool. For guided, interactive tours please visit our [Consumer Insights homepage](#).

- Target groups
- Income quantiles
- Index
- Total share of all respondents

# Target group evaluations are what you want when you reach limits with crosstabs

Consumer Insights tool: target groups

Whenever you want to analyze a specific population group in detail in the Consumer Insights tool, you have at least two options: crosstabs and target groups. For inspiring and informative crosstabs, items like the [innovator classes](#) are ideal, but you can of course cross-tabulate with all items to your heart's content. The only limit here are [splits](#).

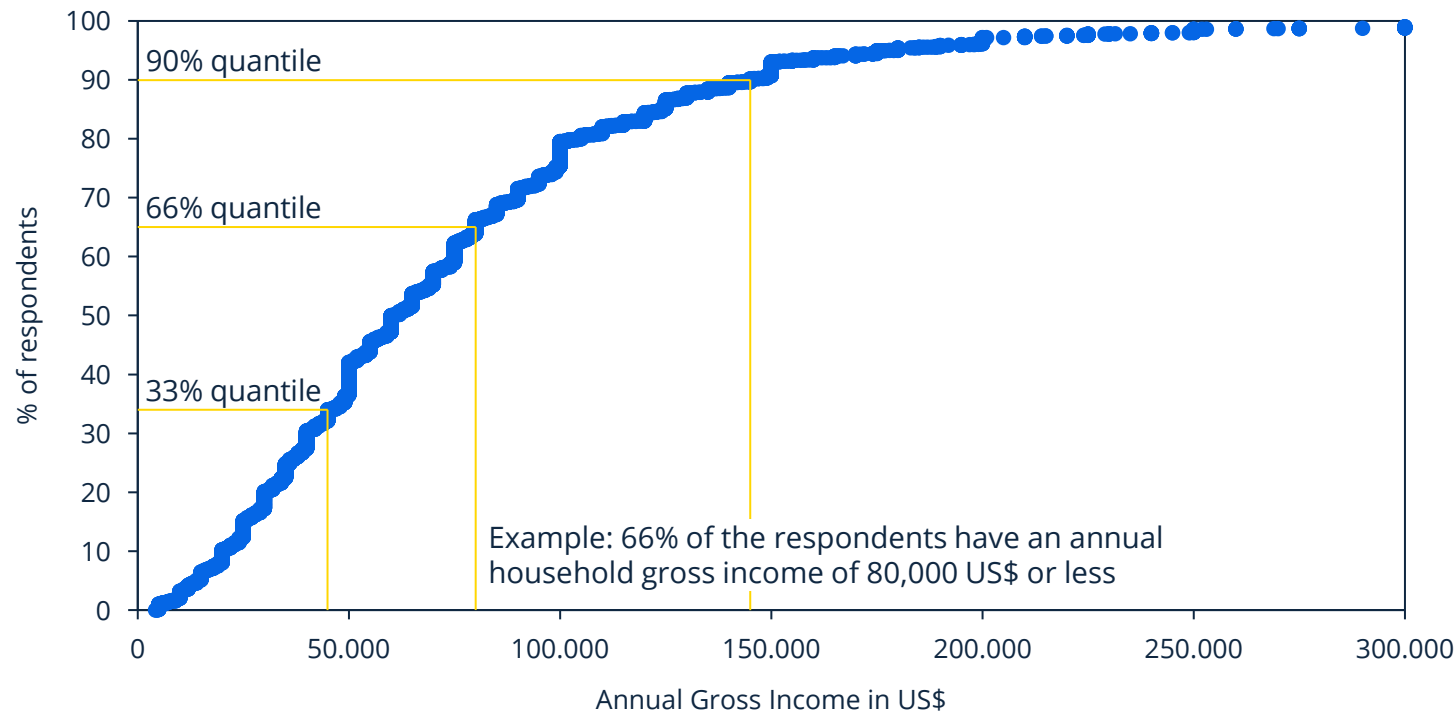

**Want more than an overview? Well our target group function is for you!**

While crosstabs are excellent for giving you a quick overview of a topic based on a more basic differentiation (e.g. most popular video game genres by gender<sup>(1)</sup>), detailed target groups allow for a consumer-analytical insights deep dive. Whether it's the most important values of millennials in the United States, the best marketing touchpoints for high-earners in Germany, or the most popular dating apps among trendy-savvy Douyin users in China - demographic target groups can be applied to all splits in the Consumer Insights tool, while target groups from the topic splits can be applied within the same split. That's why our [splits are smartly set](#).

# Money is (not) a matter of class

Consumer Insights tool: income quantiles

## Empirical Cumulative [Distribution Function](#) (ECDF) of the incomes in the U.S. <sup>(1)</sup>

The Consumer Insights are about consumption behavior, and thus, of course, also about money. Our questionnaire therefore includes an open-ended, numerical question on households' annual gross income in local currency<sup>(2)</sup>. Respondents who do not wish to report their income we ask to choose one of several categories, which vary from country to country.

We have defined the three income classes "low", "medium" and "high" using the concept of [quantiles](#), namely the 33 percent and 66 percent quantiles. We categorize income into three groups, a lower third, a middle third and an upper third. Accordingly, all groups have the same number of respondents, namely 33 percent of all respondents.

# To affinity and beyond: using the index function to find out what makes a target group tick

Consumer Insights tool: index

## Attitudes towards healthcare, Germany, 2021

*"I prefer alternative healing methods to conventional medicine"*

The affinity index is a concept from media planning. It is used there to select the optimal advertising media for a target group, but the index can be used in many ways. Which statements does my target group agree with more often than others?

**Index** Which brands and which media do they use more often? To answer questions like these as simply as possible, you can activate an index column in the Consumer Inside tool for crosstabs.

### 100 How does the index work?

The index value is a measure of the relevance a survey item has for a target group. In the Consumer Insights tool, it is calculated from the column value compared to Total. Example: In Germany, 16 percent of all respondents agree with the statement "I prefer alternative healing methods to conventional medicine". Among women it is 20 percent. This gives them an index of 125, which means that among the people who agree with this statement, women are overrepresented by 25% compared to all internet users.

**125** "I prefer alternative healing methods to conventional medicine". Among women it is 20 percent. This gives them an index of 125, which means that among the people who agree with this statement, women are overrepresented by 25% compared to all internet users.

**75** By the way: Index and sorting function are an unbeatable duo. Why not sort by index and see where your target group is particularly strongly represented?

# Would you like a little more? Calculate tables with and without filters

Consumer Insights tool: total share of all respondents

## Usage of paid digital video services by brand, Germany, 2021

„Netflix“

**Base:** respondents who spent money on digital video content

**Base:** all respondents

■ Netflix ■ No Netflix ■ Not applicable

↑  
100%

Not everyone should be asked every question. This is just as true in a survey as it is in real life. That's why we use so-called filters: we hide some questions if a respondent can't answer them meaningfully. For example, we only ask car owners about their car make, only gamers about their favorite genres in video games and only parents about the age of their children.

For example, 71 percent of the video streaming customers surveyed say they have a paid subscription to Netflix. Under each question we write exactly which base we took. In this case, it is all those who have spent money on digital video content in the last 12 months.

### Calculating with extended base

71 percent of video streaming customers in Germany are on Netflix? That sounds like a lot. How high is the share of all German internet users who use Netflix? You can get the answer to this question by activating "Total share of all respondents" in the analysis options. The tool then calculates the values in relation to the share of all respondents, not just the ones who answered the question. We see: 44% of German internet users have a Netflix subscription.

## CHAPTER 05

# First things last: appendix

Here you will find answers to the most frequently asked questions about the Statista Consumer Insights, as well as some links that we encourage you to visit. We also show you which regions we distinguish in each of the countries we survey and where we got all the beautiful pictures in this document.

- [FAQ](#)
- [Important links](#)
- [Countries & regions](#)
- [Image credits](#)

# Questions and answers – general

Appendix: FAQ (1/7)

## Who has access to Consumer Insights?

The Consumer Insights can be booked as an upgrade to our Statista accounts for corporate customers, as well as a stand-alone product. Please [ask us about the available options](#).

If you already have an account, log in to the Statista platform as usual, and [click here to access the Consumer Insights](#).

## What topics are covered by the Consumer Insights?

Our Consumer Insights Global survey contains exclusive data on more than 500 industries and topics. Get an [overview of the topics](#). Our Global survey's [questionnaire](#) gives even more details.

Our topic-specific [in-depth surveys](#) may also be of interest to you. You can view the individual questionnaires in the respective study under "Show survey details".

## Can I download the data?

You can easily download your individual analyses as CSV files, PowerPoint presentations or PNG image, and start working with them immediately.

## What surveys and updates are planned?

We update the data for countries with brands with new interviews four times a year. All other countries of the Global survey receive at least one update per year. In addition, we continuously publish topic-specific in-depth surveys. An overview of planned surveys and updates can be found in our [release calendar](#).

# Questions and answers – data & methodology

Appendix: FAQ (2/7)

## **What are the sources of the Consumer Insights?**

The Consumer Insights data comes from worldwide online surveys conducted exclusively by Statista.

## **Who is asked as part of the survey?**

The Consumer Insights contain interview data from respondents worldwide. Participation requires internet access and registration for online survey participation with one of our supplying [panels](#).

## **When are the interviews conducted?**

The data for countries with brands is collected on an ongoing basis and published once a quarter.

Surveys for countries with the basic version of the survey (countries without brands) take place in the first half of each year.

The exact survey periods for each individual data set can be found in the Consumer Insights tool under "View survey details".

## **Can I get the raw data?**

We offer respondent-level data ("raw data") from our Global survey independently of our online tool.

When you get raw data from us, you get exactly what we use on the platform. The data has gone through the same quality controls, and analytics deliver exactly the same results as the platform, but with more depth and [much more possibilities](#).

If you are interested in this offer, you are a professional. Here's more [information about our raw data](#). We look forward to hearing from you.

## **Are the Consumer Insights survey results representative?**

Short answer: Yes.

[More elaborate answer here](#).

To ensure the Consumer Insights surveys are representative for internet users in each individual country, we set quotas for age, gender and - where possible - region of the respondents.

You can find out [more about our quotas here](#).

# Questions and answers – data & methodology

Appendix: FAQ (3/7)

## **How does the rolling wave system work in detail?**

For countries and regions with brands, the Global survey employs a rolling survey system with [several survey waves per year](#).

The most recent dataset contains all interviews from the last 12 months.

Update 1 for 2019 deviates somewhat from the norm, as this was the first year in which we applied this system.

The system of rolling waves provides trend stability and a higher number of interviews available for analysis.

And we are in illustrious company: other major consumer studies (e.g. Kantar TGI, b4p, AWA, MACH Consumer, etc.) also use this principle and sometimes even combine two survey years.

What's the advantage for you? You can analyze smaller target groups, media and brands in detail.

In order for you to still have full transparency and also be able to analyze short-term trends, we provide the survey item "Survey period", that holds the exact time of when an interview was conducted. You can use this information in crosstabs and when creating target groups.

## **How often can respondents take the survey?**

Respondents are invited to our survey by our panel providers and can participate at most once every 12 months. This way, we guarantee that no respondent appears twice in any dataset.

# Questions and answers – questionnaire & definitions

Appendix: FAQ (4/7)

## **What does it mean when the term "regularly" is used in the questionnaire?**

In the vast majority of questions, we specify very specific time periods, so the questions leave little room for interpretation.

In a few cases, we intentionally use more general terms such as "regularly" when we anticipate that more precise information would be difficult for respondents to provide. In such cases, we do not further define the term "regular" but leave the interpretation to the respondents' self-assessment.

Examples include questions such as "Where do you regularly buy food and products for everyday use?" or "What kinds of social media do you use regularly?"

## **The legal drinking age is over 18 in some countries - how can I be sure that respondents in my analysis can drink legally?**

Alcohol-related questions and answers are only displayed in our survey to people who have reached the legal age for alcohol consumption in the respective country. In the United States, these questions therefore only include people who are 21 years and older, for example.

By the way, this is exactly how we do it with the legal age for tobacco consumption.

## **How are terms and topics defined in the questionnaire?**

We do not give respondents any additional definition. The questions and answers are asked as indicated in the [questionnaire](#). For topics that could be ambiguous, we provide examples in the questionnaire or narrow down what the question refers to.

## **What do "single-pick" and "multi-pick" mean?**

We use the term "single-pick" for questions in which respondents can give only one answer, for example, "What is the highest level of education you have completed?"

"Multi-pick" are questions where multiple answers are possible, for example, "Which search engines have you used in the past 4 weeks?"

The complete response shares of a single-pick question add up to 100 percent. The response shares of a multi-pick question usually add up to more than 100 percent.

# Questions and answers – questionnaire & definitions

Appendix: FAQ (5/7)

## How are the ethnic backgrounds surveyed?

We have researched in depth what is considered a common and appropriate way in each country to ascribe ethnicity to the local population and ask them about it. Since this is a sensitive issue or even illegal in some countries and is handled very differently around the globe, the list of answers may also vary greatly from country to country.

For each ethnicity question, we offer "Other" as an answering option.

In this way, respondents who do not classify themselves as belonging to any of the listed options are also taken into account. Additionally, we recode all ethnicities that account for less than 1 percent as "Other".

## How are the ethnic groups defined?

When asked about ethnicity, respondents are asked to self-identify with the category they feel best describes them. We do not give respondents additional definitions. The questions and answers are asked as they appear in the [questionnaire](#).

## How do you define innovators?

The categories "Innovator" etc. refer to the item "Attitudes towards innovation". We have six statements in this item, one of which is negative ("I buy new technologies only if they are proven") and must be negated for the respondent to be classified as an innovator.

Based on the number of selected answers, the respondents are classified into these categories:

- 1 Innovators
- 2 Early Adopters
- 3 Early Majority

- 4 Late Majority
- 5 Laggards

Respondents must have selected at least 5 of the 6 answers to be counted as innovators. The remaining categories are assigned based on the number of answers selected.

# Questions and answers – questionnaire & definitions

Appendix: FAQ (6/7)

## **How are the shopper typologies in the Global survey built?**

The shopper typologies are recodes based on respondents' answers on brand awareness, price awareness and luxury/premium product orientation in 14 categories of products and services. Accordingly, the shopper typologies are only available for the countries in which we also survey brands.

We have identified the following shopper types for you:

- Brand conscious: brand-conscious, but without price or luxury/premium consciousness
- Price optimizing: Price-conscious, but without brand or luxury/premium consciousness
- Luxury shopper: luxury conscious, or brand and luxury conscious
- Smart shopper: both price and brand conscious
- Smart premium Shopper: price and luxury conscious, or price, brand and luxury conscious

# Questions and answers – technical & support

Appendix: FAQ (7/7)

## **Can data from different countries be compared directly?**

The methodological comparability of the data for individual countries is always guaranteed. For a direct comparison of individual indicators, click on "Compare" in your analysis. In the new window, you can add as many countries and time points to your analysis as you wish.

## **Who can I contact if I have questions about the content of Statista Consumer Insights?**

For all support requests, please contact our [customer service](#). Your request will be forwarded directly to the analysts and experts in our team, who will be able to provide you with comprehensive information on your request.

## **Who can I contact if I have technical questions about the Consumer Insights?**

If you are having trouble logging into the Consumer Insights tool, please make sure you have Consumer Insights access and are logged into the Statista platform as usual. Only then will you have unrestricted access to all our exclusive data.

For all other technical support requests, please contact our [customer service](#). Your request will be forwarded directly to the responsible IT experts, who will solve all technical problems as quickly as possible.

## STATISTA CONSUMER INSIGHTS

# Understand what drives consumers

Gain a better understanding of consumers, brands, and markets. With the **Statista Consumer Insights**, you get access to streamlined market research tools and all results of the exclusive Statista surveys. Leverage consumer insights to make data-driven decisions and unlock new growth opportunities.

- Identify and understand your core audiences
- Track brand KPIs
- Analyze competitive landscapes
- Monitor consumer trends globally

[Go to Consumer Insights](#)

Find out more:  
[statista.com/insights/consumer](https://statista.com/insights/consumer)

The screenshot shows the Statista Consumer Insights website. The main headline is "Understand what drives consumers". Below it, there is a description: "Master consumers, brands and markets. With Statista Consumer Insights you get access to streamlined market research tools and all results of the exclusive Statista surveys. Explore the Global Consumer Survey (GCS), Brand Profiler, Consumer Insights Specials and more." There are two buttons: "Request access" and "Request a webinar". A laptop displays a survey titled "Attitudes towards shopping" with a table of results. Below the laptop, there are five statistics with icons: 2,000,000+ interviews, 56 countries & territories, 3.5bn.+ consumers represented, 15,000+ international brands, and 500+ topics & industries.

Survey Item	Target Group	Response Rate
1. Survey results	Female Millennials	70%
2. Characteristics & demographics	United States of America	50%
3. Marketing & social media	Need not for special offers	40%
4. Attainment & mood	Need to be able to afford all, comfortable and practical or online stores	45%
5. Food & nutrition	High stores, I tend to buy items spontaneously	40%
	Very important for me	2%
