Preface

Ontology is a cross-disciplinary field concerning the study of concepts and theories that support the building of shared conceptualizations of specific domains. In recent years, there has been a growing interest in the application of ontologies to solve modelling and classification problems in diverse areas such as Computer Science, Information Science, Philosophy, Artificial Intelligence, Linguistic, Knowledge Management and many others.

The Seminar on Ontology Research in Brazil, ONTOBRAS, foresees an opportunity and scientific environment in which researchers and practitioners from Information Sciences and Computer Science can discuss the theories, methodologies, languages, tools and experiences related to ontologies development and application.

In particular, this Seminar fourth edition was held simultaneously with the sixth edition of the International Workshop on Metamodels, Ontologies, Semantic Technologies (MOST), as the result of an effort of the research community in integrating the events on Ontologies which happened in Brazil in recent years. The goal was to create a unique highly scientifically qualified international forum for presenting and discussing this important topic.

The event was organized by the *Federal University of Rio Grande do Sul* (UFRGS) through the *Institute of Informatics* and *Faculty of Library and Communication Sciences*. It was also supported by the *Pontifical Catholic University of Rio Grande do Sul* (PUCRS), the *Federal University of Espírito Santo* (UFES) and *The International Association for Ontology and its Applications* (IAOA). The event was partially funded by **CAPES Foundation**, from the Brazilian Education Ministry, and by **ENDEEPR Knowledge Systems**.

Researchers and practitioners were invited to submit theoretical, technical and practical research contributions that directly or indirectly address the issues above. The call for papers was open for two categories of submissions: Full papers (maximum 12 pages) written in English and describing original work with clear demonstrated results. Accepted full paper were invited for oral presentation. The second category was short papers (maximum 6 pages), written in Portuguese, or English, or Spanish and describing ongoing work. Accepted short papers were be invited for poster presentations.

We received 29 full-paper submissions, out of which 7 are accepted for publication and oral presentation; and 36 short-paper submissions, out of which 16 are accepted for publication and poster presentations. Also, the reviewers considered that another 7 full papers, while too premature to be accepted as full papers, are relevant enough to be presented as posters. This volume is thus constituted by 7 full papers and 20 short papers, selected by our program committee, which is composed by national and international referees.

We thank the organizing committee for their commitment to the success of the event, the authors for their submissions and the program committee for their hard work.
