

MAKE YOUR OWN PUZZLE. (AGES 4-99+)

The image that you have to put together corresponds to a region in the sky colloquially called “The pillars of creation”. In this region, made of gas and dust, baby stars are being created! The photograph was taken with a big telescope that is in space called the Hubble Space Telescope. This telescope acts as a giant magnifier that allows us to see what’s in our Universe!

Use scissors to cut the rectangles and put together the pieces to form the Pillars of creation! To preserve your puzzle you can glue the pieces on cardboard. You can see the complete image on the next page.
