

NASA Flight Opportunities

Leveraging SBIR Awards for Suborbital Flight Tests

Stephen Caskey, Ph.D., Air Squared
Michael Ewert, NASA's Johnson Space Center
Alexander van Dijk, Flight Opportunities

Community of Practice Webinar Series – January 5, 2022

Session will start at 10 a.m. PT – Please mute your microphone and turn off your camera

www.nasa.gov

NASA FLIGHT OPPORTUNITIES

Welcome to the Community of Practice Webinar Series!

First, a bit of housekeeping...

- Please mute your microphone and turn off your camera
- Today's session will be recorded
- Recordings for this and all future session will be posted on the Flight Opportunities website
- Please engage!
 - Use the chat throughout the session to ask questions

2

NASA FLIGHT OPPORTUNITIES

NASA
National Aeronautics and Space Administration

Flight Opportunities Mission

The Flight Opportunities program facilitates **rapid demonstration** of promising technologies for space exploration, discovery, and the expansion of space commerce through **suborbital testing with industry flight providers**.

Join us for future Community of Practice webinars!

Watch our website and newsletter for next month's topic

[nasa.gov/directorates/spacetech/flightopportunities/newsletter](https://www.nasa.gov/directorates/spacetech/flightopportunities/newsletter)

Future webinars

- Webinars are held 1st Wednesday of each month at 10 a.m. PT
- Topics will be announced in the Flight Opportunities newsletter and website
- Session recordings will be posted on the Flight Opportunities website
- Let us know session topics you would like to see covered

SBIR Overview - What exactly do I get?

Up to \$1.15 million for Phase I and II and nearly \$3 million or more for Post Phase II opportunities!

The flowchart illustrates the SBIR process. It starts with three main phases in blue circles:

- PHASE I**: Idea Generation, \$150,000, SBIR 6 months, STTR 13 months. Includes an I-CORPS icon.
- PHASE II**: Prototype Development, \$1,000,000, 24 months (Planned).
- PHASE III**: Infusion/Commercialization, Non-SBIR Funding.

 Arrows connect these phases. Below Phase II, a box labeled 'POST PHASE II OPPORTUNITIES' contains three options:

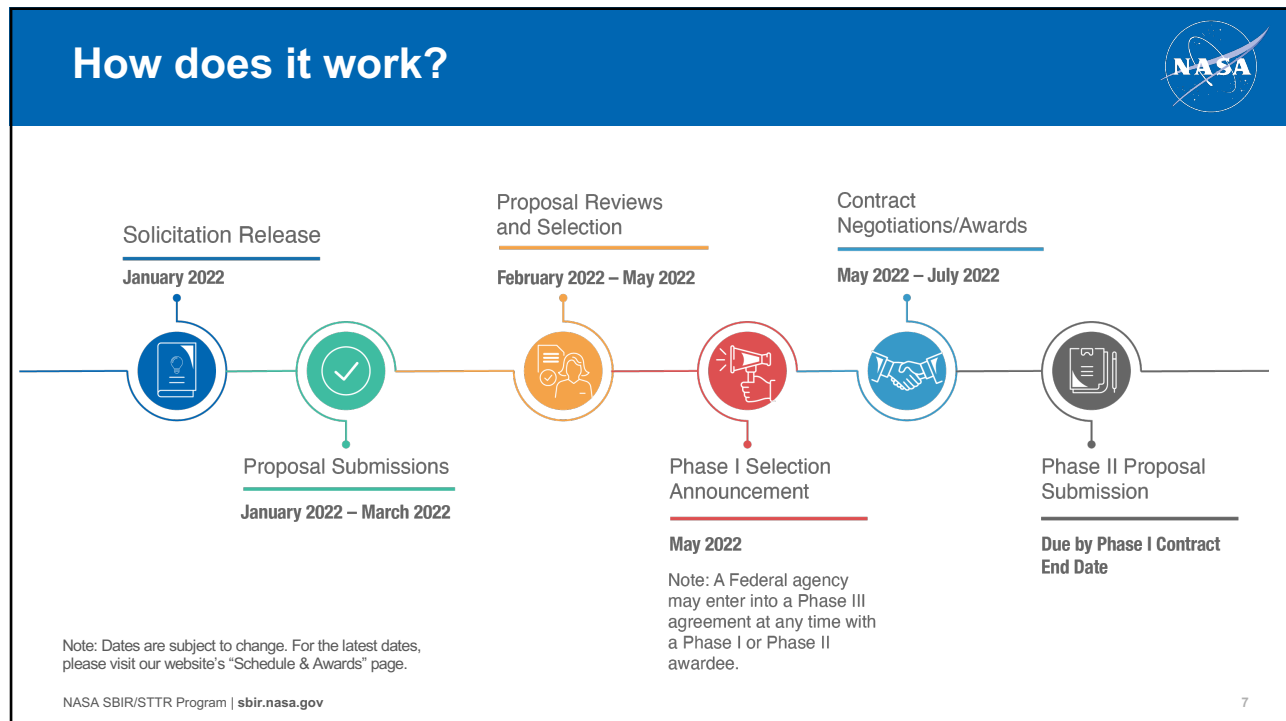

- PHASE II - E**: Reqs matching funding up to \$375,000, 6 to 12 months.
- PHASE II SEQUENTIAL**: Occasional opportunity (not routine), Varying award amount, 24 months+.
- CCRPP**: Reqs matching funding \$500,000 to \$2,500,000, 24 months.

 An I-CORPS icon is shown at the bottom of this section.

Note: The 2022 Phase II funding amount is planned to increase to \$1 million from \$750,000. This is dependent on the final budget appropriated by Congress.

2022 NASA SBIR/STTR Solicitations

January 6 – March 9, 2022

Changes from previous years:

- Phase I funding will increase from \$125,000 to \$150,000
- SBIR and STTR will be split into separate solicitations
- Phase II requirements will no longer be part of the Phase I solicitations
 - Phase II submissions details will be available to Phase I awardees toward the end of their period of performance

Overview of Parabolic Flight Tests

- Project Members
 - Air Squared – **SBIR Prime**
 - Oil-free scroll hardware
 - Prior NASA Projects
 - Phase I – 7 completed
 - Phase II – 4 completed
 - Phase II-E – 1 completed
 - ISS Demonstration Refrigerator
 - Purdue University – **SBIR subcontractor**
 - Liquid flooded evaporator investigation
 - Highly instrumented benchtop system
 - Whirlpool Corporation – **Phase II-E investor**
 - Supported ISS Demo design and any issues encountered during flights
 - Johnson Space Center – **Phase II-E investor**
 - Armstrong Flight Opportunities – **Phase II-E Investor**

Mars 2020 Moxie

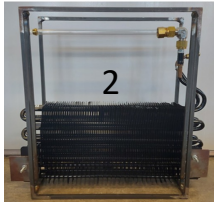

Overview of Parabolic Flight Tests

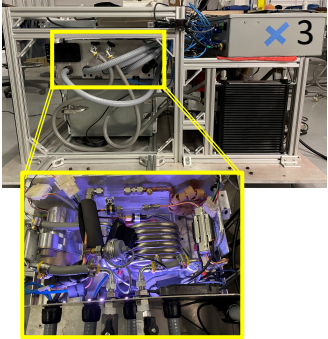

- Flew three separate experiments with three investments to create Phase II-E
 1. Complete VCC
 2. Transparent Evaporator
 3. ISS Refrigerator

Data rights shall be in accordance with CFR 52.227-20-Rights in Data

Vapor Compression Cycle Technology After Parabolic Flights

- Numerous (at least 4) journal publications generated sharing flight results
- Two-phase flow in evaporator transition into flow regime during microgravity and aids compressor ingesting only vapor
- Created VCC scaling approach to communicate requirements on larger storage volumes
- Seeking NASA contractor to support design iteration to fly small ISS refrigerator on station for continuous microgravity operation

Data rights shall be in accordance with CFR 52.227-20-Rights in Data

15

15

Key Lessons Learned

- Started Phase II-E plans early Q6 during Phase II
- RPP required for Zero-G
 - Engaging early was extremely beneficial
 - First experiments flown with pressurized refrigerant
- Ground fault circuit breaker caused issues with custom built stands
 - Should be removed on future flights
 - Replicate Zero-G flight equipment as much as possible when conducting ground tests
