

Tapio

Switch Interface for iPad, iPhone and iPod Touch

- Lightning Fast
- Very Low Power
- Device Powered – No Batteries
- Reliable Direct Connection – No Bluetooth Pairing Issues, Dropouts, or Sluggish Connections
- Multi-Platform – Works with Apple iPad/iPhone, and Mac, Windows and Chromebook Computers
- Accepts up to Two Adaptive Switches (3.5-mm/0.125-inch)
- Apple Switch Control (iOS7 and newer)
- Supports Long Press for "Four Switch" Functionality
- High Performance Scan Modes
- Apple Lightning Adapter is Included, with or without a Recharge Port
- Origin Instruments Quality, Reliability, and Support

Tapio™ brings Origin Instruments' history of high performance, yet easy to use switch interfaces to the Apple iPad and iPhone. Simply plug the Tapio/Adapter pair into the iOS Device, run through the short Apple configuration process and begin scanning – it's that simple.

If your app expects RJ Cooper switch events, select them on the DIP switch, plug in Tapio and scan.

Direct plug-in solves a multitude of issues. It eliminates confusion with Bluetooth ghost pairings, adding and deleting devices or entering pairing codes. Further, with direct plug-in there are no batteries to recharge or to replace.

Use with single or dual switches.

Since Tapio is a native USB switch interface, use it on other platforms as well – Windows, Mac, Android, Chromebook and AAC Devices.

Simply brilliant.
